

# Offshore Technology in Civil Engineering: Volume 6 : Hall of Fame Papers from the Early Years

Edited by J. S. Templeton, Edited by Alan G. Young, Edited by Joseph Kallaby

This is the fifth volume in a series of publications containing classic papers from the early years of the Offshore Technology Conference (OTC), the worlds leading event for the development of offshore resources in the fields of exploration, drilling, production, and environmental protection. The American Society of Civil Engineers, through its participation in and support of the OTC, plays a major role, in the innovation and evolution of the technologies needed to overcome the challenges facing development of resources in the offshore environment. The years since the first Offshore Technology Conference in 1969 have seen the presentation of over 10,000 papers in the various technical disciplines central to offshore development. A few of the civil engineering papers presented throughout OTCs history provided innovation in, vision for, and lasting impact on the design, construction, or installation of offshore infrastructure. Many have been adopted by design standards worldwide or became an integral part of design software. Some have had influence far beyond the offshore industry, and some have become integral to the design process of onshore structures such as buildings and bridges. Offshore Technology in Civil Engineering: Hall of Fame Papers from the Early Years, Volume Five is a collection of the eight winning papers inducted in 2010 at an award ceremony during OTC in May of 2010. The engineering methods published in these papers have proven their value through widespread use, permeating codes, standards, guidelines, and engineering software.
