

# Older Adults, Health Information and the World Wide Web

Edited by Roger W. Morell

Older Adults, Health Information, and the World Wide Web is devoted to the exploration of how the World Wide Web might be used to deliver current, easily accessible health information to adults over the age of 60 and their caregivers. The book considers how age-related changes in vision, cognitive function, and motor skills affect the delivery and comprehension of health information. The volume is divided into four separate sections. Within these sections, individual chapters: \*trace the increasing use of the Web by older adults and offer suggestions on how use can be increased \*discuss federal government initiatives on increasing use of the Web by older adults \*offer guidelines that might be applied to Web site design for older adults and \*describe actual projects in which older adults utilize the Web for various outcomes. Intended for health care providers, health service providers, and older adults and their caregivers, this book is also of interest to researchers in aging, cognition, and human factors.
